LinkedIn: linkedin.com/in/nimishsood

Portfolio: nimishhomelab.com

Summary

Computer science student focused on security infrastructure, log analysis, and reproducible security data work. Strongest public proof is a Wazuh homelab, malicious URL detection analysis, and a deployed Next.js project.

Selected Projects

Wazuh Homelab: Two Ubuntu 24.04 VMs on VMware Workstation for Wazuh Indexer and Wazuh Dashboard, with TLS workflow, JVM tuning, and verification notes.

Malicious URL Detection: 651,191 rows loaded, 640,792 kept after cleaning, 80,000-row modeling sample, saved binary and multiclass metrics.

CropGuard: Next.js 15, TypeScript, Firebase, and Leaflet project shipped with a teammate and deployed publicly on Vercel.

Current Focus

SOC analyst, detection engineering, and security engineering opportunities.

AI/LLM work remains exploratory and is not the main portfolio claim.
